

Storyboard: CRT System Startup

These are the ideas I came up with; I want to create a glitching computer CRT that's booting up.

Frame 01: System Powers On

A single green pixel appears and blinks in the center of the screen, showing that the old CRT-style system is beginning to power on.

Frame 02: Loading Bar Appears

A pixelated green loading bar appears on the black screen, showing the computer starting its boot sequence.

Frame 03: Glitching Happens

Scattered green glitch lines and blocks flicker across the display, suggesting the system is unstable during startup.

Frame 04: Scan Line Appears

A green scan line appears across the screen like a CRT or oscilloscope sweep, showing the system checking itself before coming online.

Frame 05: System Online

The “SYSTEM ONLINE” message appears, showing that the system has successfully completed its startup process.

Frame 06: System Glitches Off

The screen glitches and collapses into a CRT-style shutdown effect, creating an unstable outro that matches the retro computer theme.
