

Creative Brief and Storyboard

Concept

I created a five-second cartoon-style motion graphic about a paper airplane flying through a simple sky scene. The airplane enters from off screen, flies in front of moving clouds, performs a loop, and exits the frame. The scene then transitions down to a grassy area with a tree, where the airplane returns from the right and lands.

The animation ends with the phrase “SEND IT!” sliding in from the right in Cooper Black. The project uses clean cartoon assets, motion blur, position and rotation keyframes, a sky to ground transition, and a subtle Soft Light blend mode over the gradient background.

Theme

The theme is cartoonish. The paper airplane, clouds, grass, tree, and final text all work together to create a simple animated scene about a paper airplane that landed successfully.

Target Audience

The target audience is viewers who enjoy short, simple, and playful motion graphics. The animation is designed to be quick, readable, and fun within a five-second format.

Visual Style

The visual style is clean and cartoon-like. The scene uses a soft gradient sky, simple clouds, grass, a tree, and a paper airplane. The final text uses Cooper Black because the rounded letterforms match the playful cartoon style.

A subtle Soft Light blend mode is used over the background gradient to add a little atmospheric depth without distracting from the motion.

Possible Applications

This motion graphic could be used as a:

- Short social media animation
- YouTube intro or outro

- Animated sticker-style graphic
- Playful title card
- Class motion graphics project

Assets Used

The assets used include:

- Paper airplane graphic
- Cloud graphics
- Tree graphic
- Grass graphic
- Gradient sky background
- “SEND IT!” text in Cooper Black
- Soft Light sky highlight layer

Animation Plan

The animation is five seconds long at 1920×1080 , 30 fps.

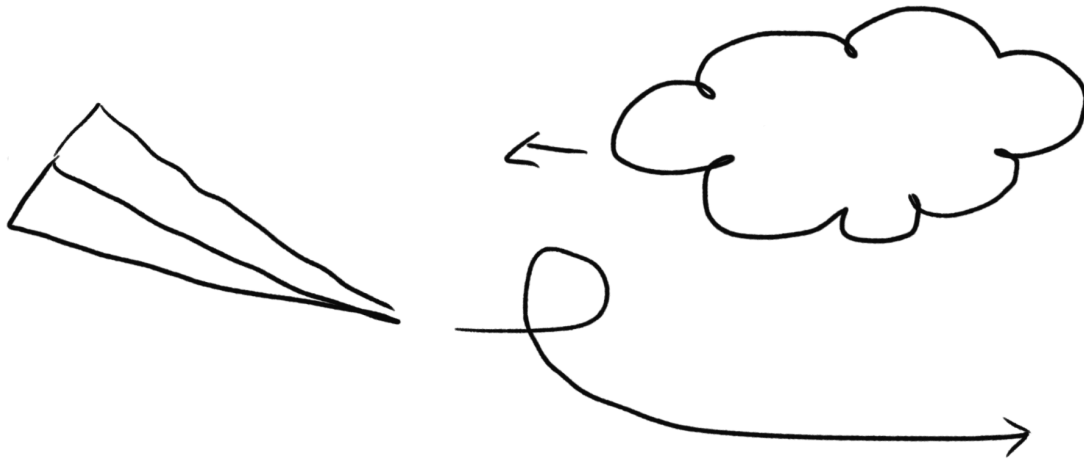

A paper airplane flies across the sky using position and rotation keyframes, performs a loop, and exits the screen. Motion blur helps the fast movement feel smoother. Moving clouds add background motion.

The scene then transitions downward to reveal the grass and tree. The airplane returns from the right, lands on the grass, and the final “SEND IT!” text slides in from the right to complete the outro.

Storyboard

Frame 1 - Sky Entrance / Intro

The animation begins in a simple cartoon sky with a gradient background and a moving cloud. The paper airplane enters from off screen on the left.

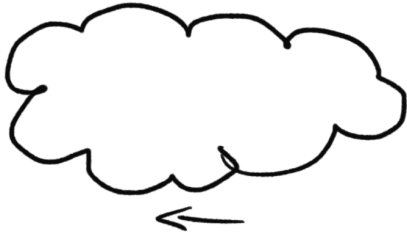

Beat: Intro

Motion: Plane enters, cloud drifts.

Frame 2 - Plane Loop / Beat One

The airplane performs a loop in front of the moving cloud. Position and rotation keyframes create the curved flight path, while motion blur makes the movement feel smoother.

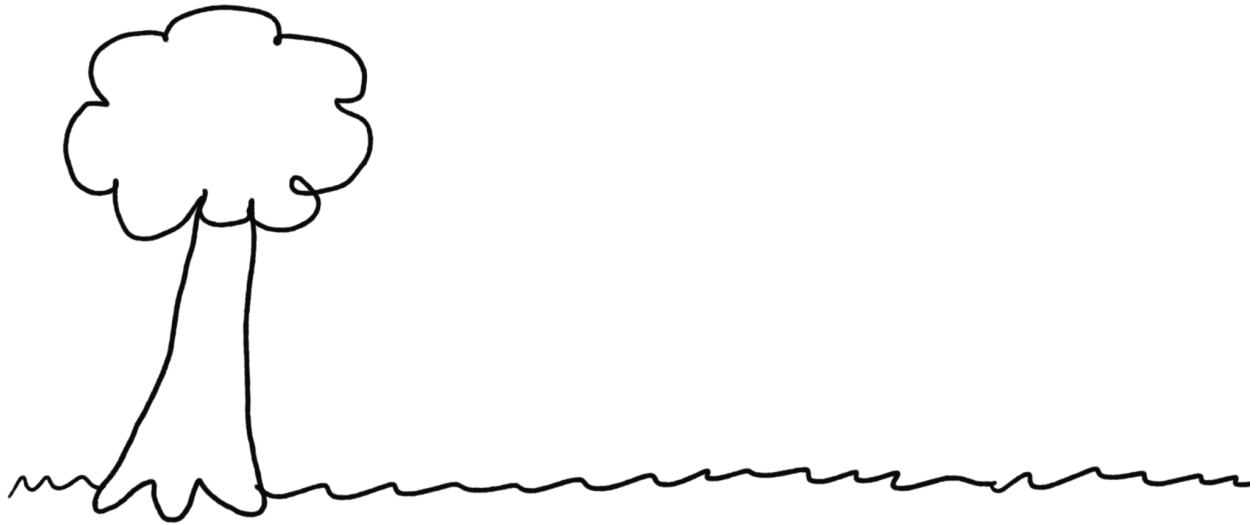

Beat: Beat One

Motion: Plane loops through the sky.

Effects: Motion blur.

Frame 3 - Plane Exits / Beat Two

The airplane finishes the loop and flies off screen to the right. This keeps the motion moving forward and prepares for the scene change.

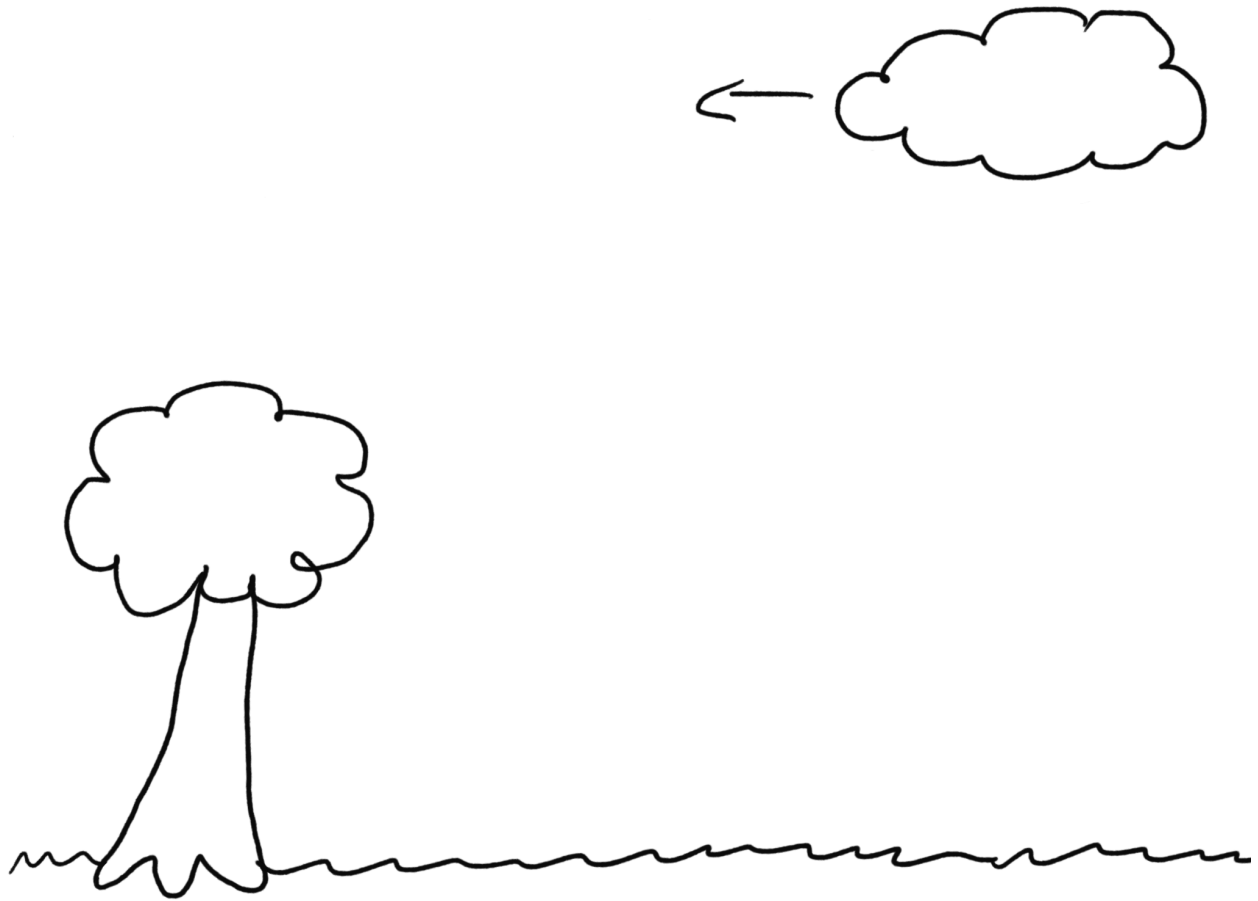

Beat: Beat Two

Motion: Plane exits frame.

Frame 4 - Sky-to-Ground Transition / Beat Three

The scene pans downward from the sky to reveal the grass and tree. This creates the main visual transition from flying to landing.

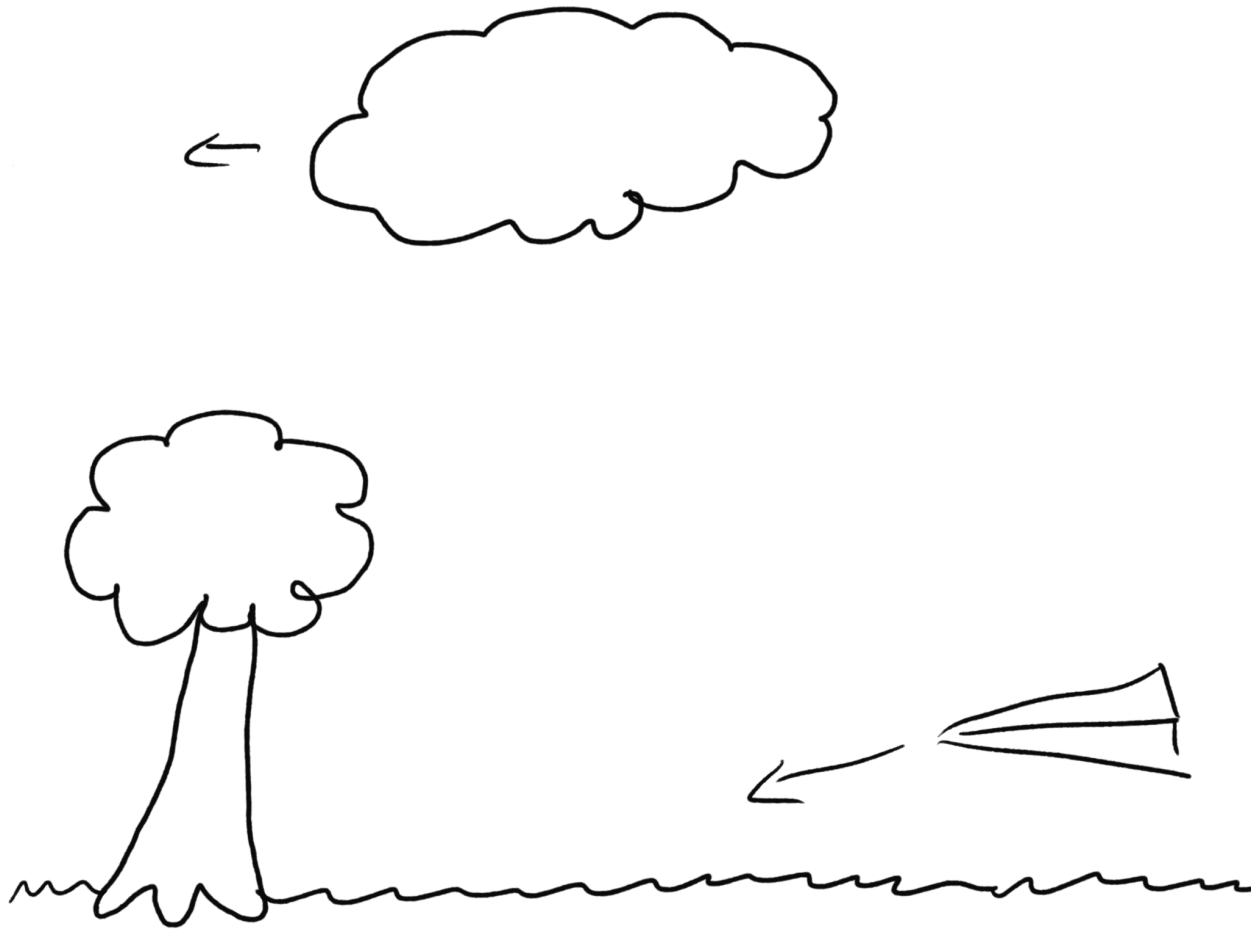

Beat: Beat Three

Motion: Camera/background pans down.

Transition: Sky-to-ground reveal.

Frame 5 - Landing Approach / Beat Four

The airplane returns from the right side and approaches the grass. The tree and grass create the landing area, while another cloud moves through the background.

Beat: Beat Four

Motion: Plane approaches landing, cloud drifts.

Frame 6 - Final Landing and Title / Outro

The airplane lands on the grass, and the final “SEND IT!” text slides in from the right in Cooper Black. The ending holds as a clean final title card.

Beat: Outro

Motion: Plane lands, text slides in.

Final title: SEND IT!
